

LARS BENEDETTO

SENIOR BACKEND / PLATFORM ENGINEER

ABOUT

Backend engineer on the Foundation (platform) team at Too Good To Go, owning the core of every Java/Kotlin Spring Boot service in the company. I design the infrastructure other engineers build on — including an annotation-driven SQS messaging stack handling ~100M messages/day across ~1000 queues — and I'm the person who diagnoses the deepest production failures: virtual thread deadlocks, JVM segfaults, and memory issues via heap dump and JFR flamegraph analysis.

WORK EXPERIENCE

December 2020 – Pres

Senior Software Engineer, Foundation Team

Too Good To Go is the world's number 1 app for fighting food waste. The Foundation team owns and maintains the core of every Java/Kotlin Spring Boot service across the company.

Highlights

- Designed and built an SQS message-processing stack with guaranteed at least once delivery now handling ~100M messages/day across ~1000 queues. Engineers add a Java annotation and queue provisioning in AWS, consumers, retries, and scaling are handled automatically. Deep observability with Grafana.
- Own the platform other backend engineers build on: distributed caching (Redis), messaging (SNS/SQS), and reusable Spring AOP abstractions that let teams inject complex functionality with a single annotation
- Primary responder for production incidents across all JVM services — diagnosed virtual thread deadlocks, tracked down a JVM bug with multithreaded font rendering when using tcmalloc causing production segfaults, and routinely analyze heap dumps and JFR flamegraphs to find memory and performance bottlenecks
- Maintain the GitHub Actions CI/CD workflows

January 2020 – December 2020

DevOps Engineer

Too Good To Go is the world's number 1 app for fighting food waste.

Highlights

- Manage our AWS infrastructure via the Web UI and Terraform
- Working with Jenkinsfiles, Helm charts, Kubernetes, ArgoCD, Rancher, etc
- Built Apache Camel data pipeline

March 2019 – January 2020

Software Engineer

Too Good To Go is the world's number 1 app for fighting food waste.

Highlights

- Build new features and endpoints for the app and web
- Strangle pattern migrate PHP to Spring Boot
- Design the core of the TGTG service, the Discover Feed endpoint. A highly flexible system allowing backend engineers to easily add new buckets of items, populated by opensearch.

October 2018 – March 2019

Android Developer

Too Good To Go is the world's number 1 app for fighting food waste.

EDUCATION

2013
2018

Eastern Washington University

Bachelors

Computer Science

SKILLS

JVM Performance & Reliability

Heap dump analysis JFR Flamegraphs
Virtual threads Deadlock diagnosis
Thread pool tuning Production incident response

Backend Development

Spring Boot Event-driven / messaging (SNS/SQS)
Elasticsearch Redis MySQL Microservices

DevOps

AWS Docker Kubernetes Helm
Rancher Terraform Jenkins ArgoCD

Web Development

HTML CSS Javascript Typescript SQL
PHP

Languages

Java Kotlin Dart C++ C Python

Application Development

Android RxJava Retrofit Flutter
Cocos2dx

- ◀ Build new features for the Android App
- ◀ Kotlin, Coroutines

May 2018 – August 2018

Software Developer

Firecracker Software is a United States company that makes word games for iOS, Android, and the Web

Highlights

- ◀ Build the native Android GDPR system for use in all previous and future products
- ◀ Wrote mini-games in C++ for integration into new game
- ◀ Collaborate with artists to design UI and UX of new game

October 2016 – May 2018

Software Developer

VIP Traders is a United States company specializing in the import and export of used and slightly-used vehicles and equipment

Highlights

- ◀ Build company website for customers to access company services
- ◀ Build an Android app for scanning VIN bar-codes into an cloud spreadsheet
- ◀ Design office automation utilities
- ◀ Provide general tech support

June 2014 – August 2014

Programming Instructor

Teach middle school age students to program at summer camp

Highlights

- ◀ Designed a lesson plan for teaching approximately 25 students the basics of programming through ApplInventor and Scratch

 VOLUNTEER

TeConnections

September 2011 – June 2013

Technician

Spokane Public Schools "Reuse before Recycle" program for repairing computers to be distributed to those in need

Highlights

- ◀ Dismantle donated broken computers and assemble the working parts into a computer for redistribution to those in need
